Folder Structure:

CODE //main folder

virtual_cloud_86_93.c //main c file

scripts //folder containing all the scripts used

database //folder containing all the files used for maintaining info

helper //folder contains helper file

Running Instruction:

Assumption: You should have an existing image through which clone can be created .

Step 1: Make sure libvirt library is already installed on the system.

Step 2:Change the name of the image in script/create-clone.sh

Step 3: Compile the virtual_cloud_86_93.c file using following command.

Gcc virtual_cloud_86_93.c -lvirt
